# IPR – Solutions at hand

Our components make your robot more intelligent, flexible and versatile

## Innovation meets top quality

IPR Intelligente Peripherien für Roboter GmbH is a leader in the development and manufacturing of products related to industrial robots and offers an extensive product range with innovative systems and components for assembly and handling technology. Our parallel and angular grippers, tool changers, joining and compensating systems as well as load limiters, 7<sup>th</sup> axes for robots and customer-specific solutions are used by customers in many countries around the world.

Companies from all industries trust our products. Quality, technical and industry knowledge are our most important success factors.

We offer you standard products ready for immediate use, but we also support you in special and large-scale projects. Here you benefit directly from the development and manufacturing technologies in our house.

# Industry-specific solutions

## For robot applications and automation solutions

**Assembly and handling technology**

**Machinery loading and unloading**

**Foundry and forge**

**Automotive**

**E-mobility**

**Medicine and pharmaceuticals**

### Increased value for your application

IPR components are used in a wide variety of industries. The high variance in the product series combined with the possibility of creating modified standard or specifically designed special products in a short time holds a lot of potential for meeting the requirements of our customers. Our success is the result of many years of experience in

our company. Our employees are professionals in their field and have extensive knowledge around industries and production processes. This is how we continually develop innovative, high-quality and high-performance solutions for each individual project.

# Individuality for your application

## From standardized to customized

For individual solutions, we combine standardized components with custom-built modules to reduce design and delivery times as well as costs. Our company provides these services for a wide range of industries such as the

automotive and supplier industry, machine tools and plant engineering, intralogistics, electrical industry, renewable energies, medical technology and the aerospace industry.

# IPR offers everything that robots need to work

## Discover our extensive portfolio of peripherals for robots

Our product range of series-produced automation modules includes a variety of grippers and tool changers, joining and compensation modules, collision protection systems and 7<sup>th</sup> axes for robots.

Within the individual product types, differently graded sizes are available for all load ranges. The excellent quality of our product range ensures high availability as well as smooth use in the production process.

We would be pleased to inform you about our components and technologies. Benefit from the many years of experience of IPR consultants.

### IPR stands for:

#### ■ Customer proximity

We are always there for our customers with advice and support.

#### ■ Internationality

We are on site worldwide.

#### ■ Innovation

We offer innovative solutions in top quality.

#### ■ Competence

We utilize many years of experience and the know-how of all employees.

#### ■ Quality and flexibility

We live lean structures and short decision-making paths.

**5**

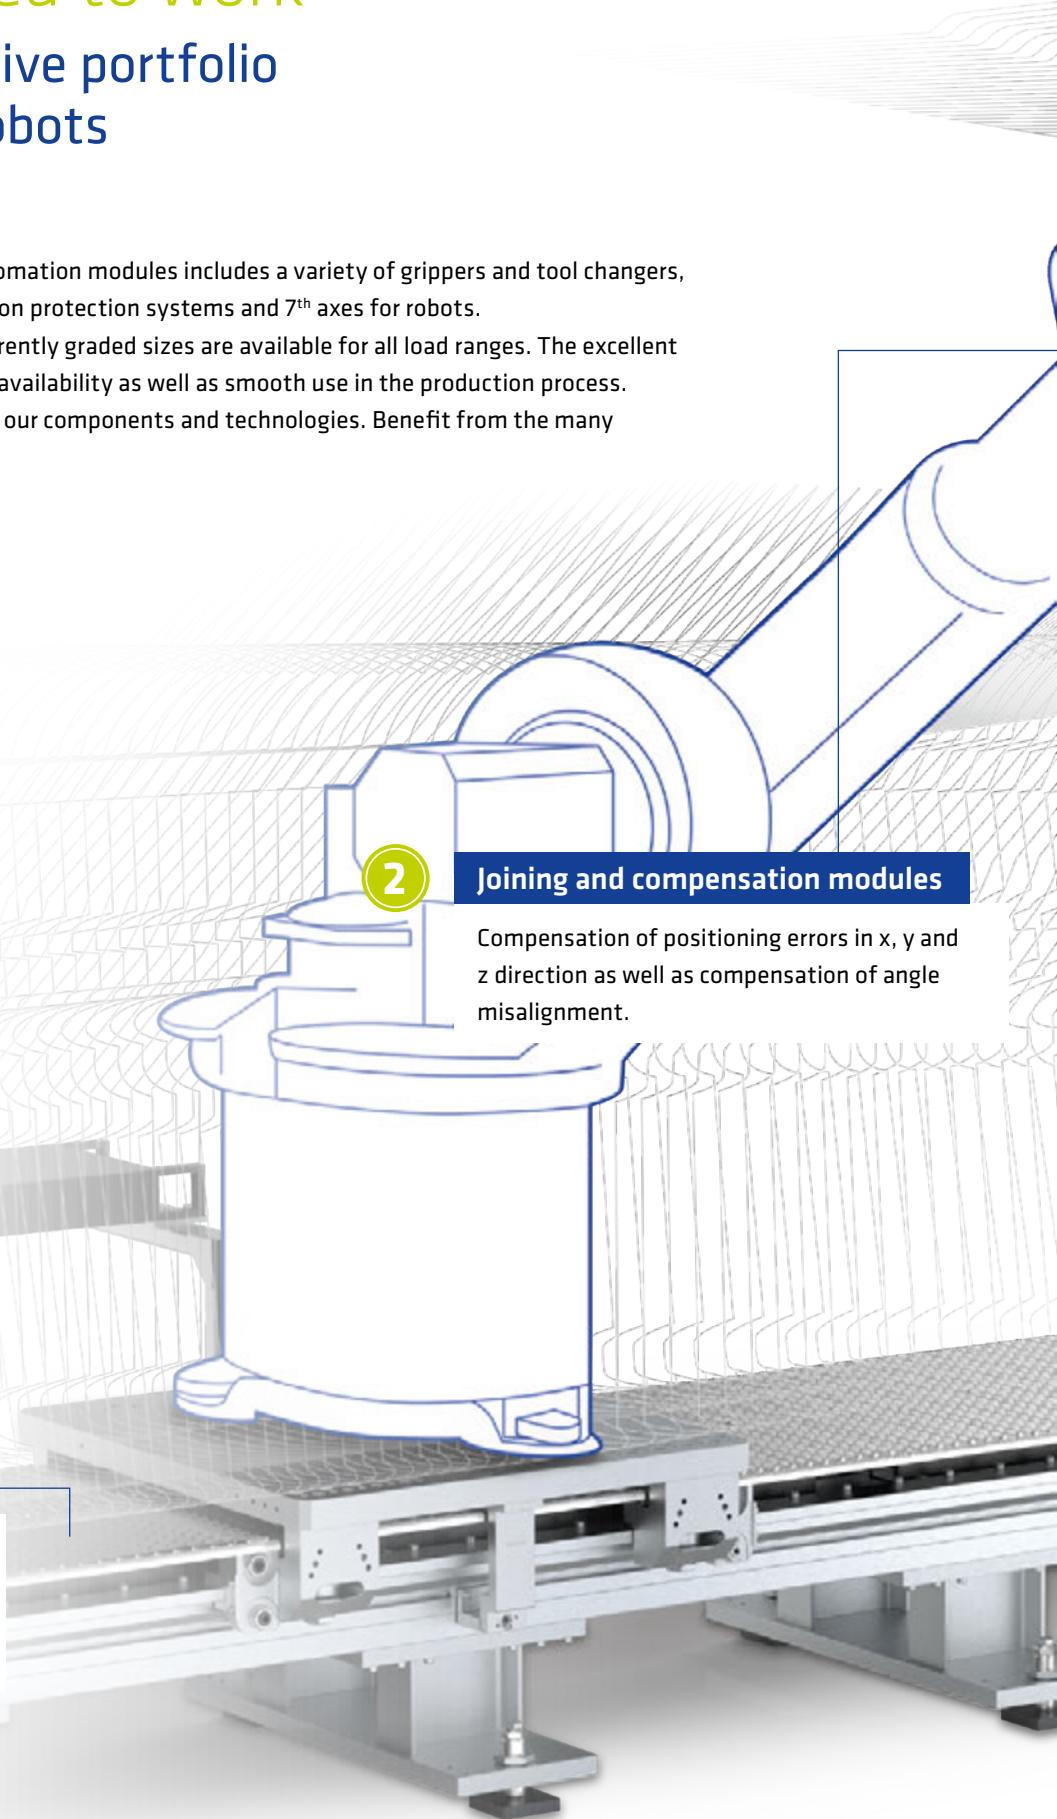

#### 7<sup>th</sup> axes

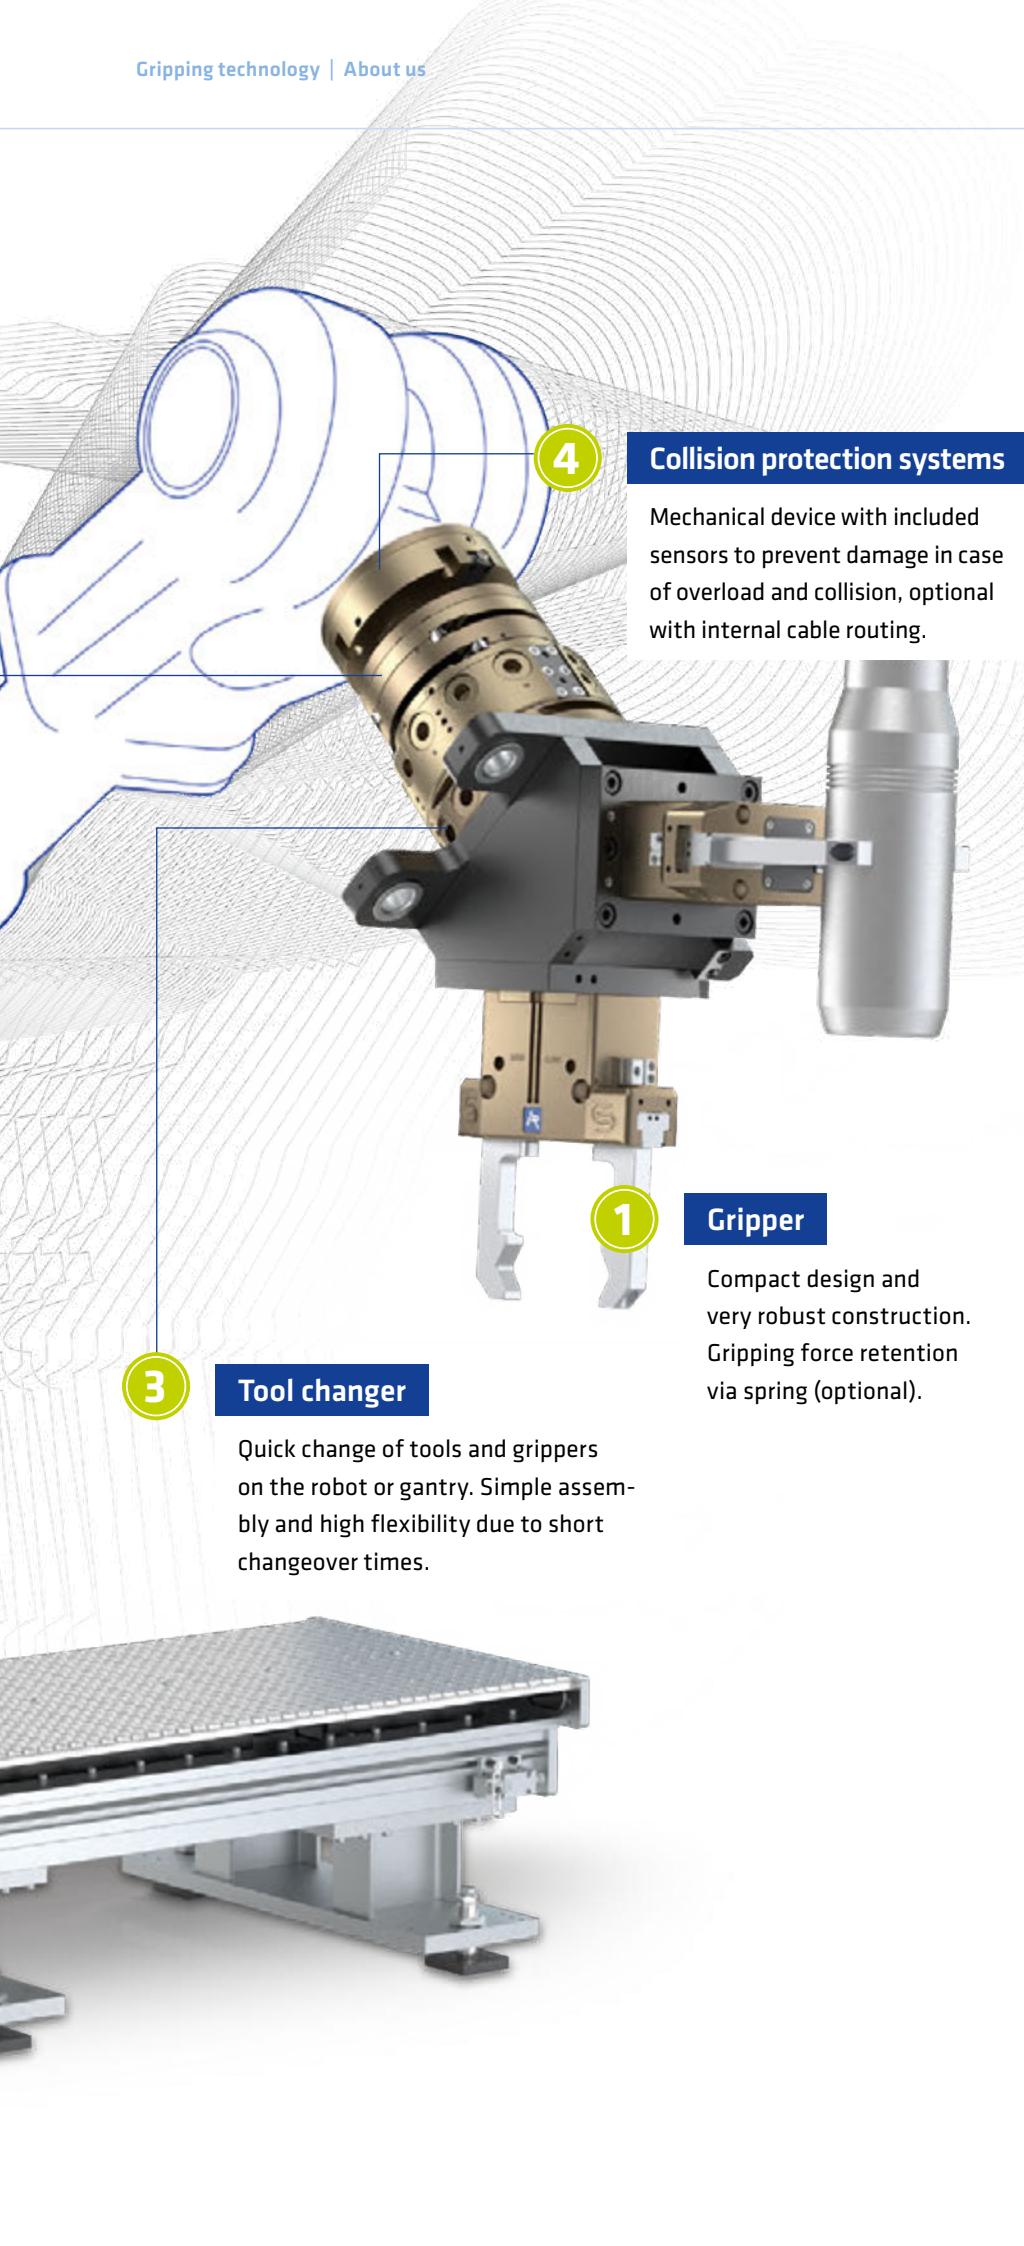

Modular system.  
High repeatability.  
Extreme load capacity.  
Long life.

**2**

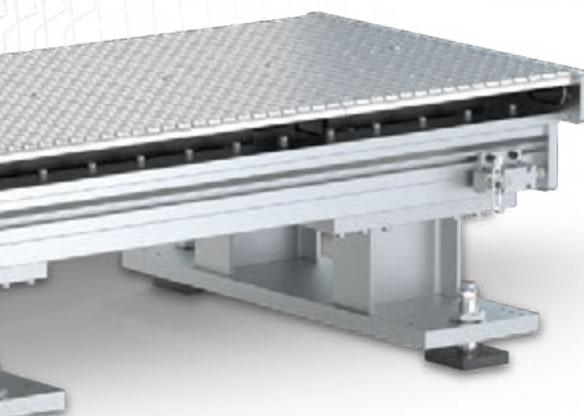

#### Joining and compensation modules

Compensation of positioning errors in x, y and z direction as well as compensation of angle misalignment.

**3****Tool changer**

Quick change of tools and grippers on the robot or gantry. Simple assembly and high flexibility due to short changeover times.

**4****Collision protection systems**

Mechanical device with included sensors to prevent damage in case of overload and collision, optional with internal cable routing.

**1****Gripper**

Compact design and very robust construction. Gripping force retention via spring (optional).

**1****Gripper****2****Joining and compensation modules****3****Tool changer****4****Collision protection systems****5****7<sup>th</sup> axes for robots**

# Everything under control

## The gripper portfolio from IPR

IPR's grippers increase the productivity of automated manufacturing equipment by reliably gripping workpieces of all sizes, with a wide variety of geometries, and in any environment. Specially sealed standard variants for use in dirty and dusty environments, high-temperature variants for foundry and forging applications, and a hybrid gripper with electric-pneumatic drive make selecting the right gripper child's play.

A broad portfolio of suitable sensors for stroke sensing, gripper pads to protect fragile workpieces, and pressure maintenance valves for additional safety round off the portfolio. And if the right solution cannot be found in the standard, we will develop a gripping system for you that is optimally tailored to the application.

### Parallel grippers

#### CGS2

- + Payload up to **95 kg**
- + Gripping force up to **30,000 N**
- + Total stroke from **4 to 90 mm**

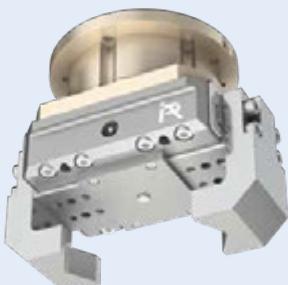

- Universal gripper with a high number of variants
- Optional: gripping force retention
- Variants: dust cover (IP64) and high temperature

#### IRP

- + Payload up to **95 kg**
- + Gripping force up to **17,200 N**
- + Total stroke from **20 to 64 mm**

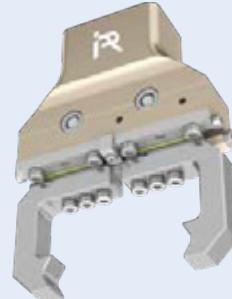

- Robust steel-on-steel guide
- ISO flange for simple mounting to the robot without adapter plate
- Optional: gripping force retention

#### RP

- + Payload up to **8 kg**
- + Operating pressure from **1.5 bar**
- + Total stroke from **13 to 51 mm**

- Very smooth-running with roller guide
- Enables precise gripping
- High repeatability

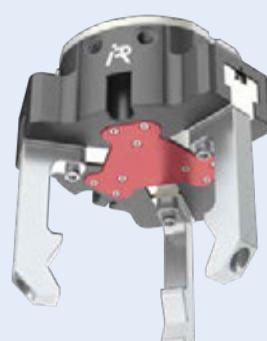

### Centric grippers

#### CGS3

- + Payload up to **35 kg**
- + Gripping force up to **16,000 N**
- + Per-jaw stroke from **2.5 to 25 mm**

- Perfectly suited for gripping round components
- High number of variants
- Optional: gripping force retention and dust cover (IP64)

## Make use of the CAD portal online!

In the IPR online portal, you can view your desired product in 3D from all sides and compare different sizes and versions. You will also find all technical data and drawings in one place. You also have the possibility to contact us directly. And in case you need the data offline, you can download CAD and drawing data as well as data sheets for each product.

Try it now: <https://ipr.partcommunity.com>

### MGS

- + Payload up to **1.45 kg**
- + Tare weight from **25 g**
- + Total stroke from **1.5 to 14 mm**

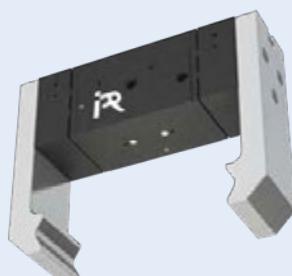

- Precise gripper for small components
- High power density with compact dimensions and low weight
- Optional: gripping force retention

### RPW

- + Payload up to **15 kg**
- + Gripping force up to **1,550 N**
- + Total stroke from **19 to 114 mm**

- Sealed rod guide
- Large stroke with compact dimensions
- Robust and durable

### Customizing

- + Tailored solution competence
- + Our solutions perfectly customized to your needs

- Our various teams of experts implement the process from the development of ideas construction to production.
- Development of customized individual solutions based on our standard program.
- Shortening of construction and delivery times – the costs are lower.

## Angular grippers

### WGS

- + Payload up to **8 kg**
- + Gripping torque up to **437 Nm**
- + Opening angle (total): **30°**

- Developed for rapid gripping of various components
- Durable, robust construction
- Optional: gripping force retention and stroke limitation

# CGS2 – The 2-jaw universal parallel gripper

## Key advantages of our CGS2 series

### Fields of application

The gripper series was developed for universal use. From clean assembly applications to dirt-prone applications in forges and foundries, there is a suitable gripper version for every task.

### Function description

The vertical stroke movement of the oval piston is translated via wedge hook into a horizontally synchronized movement of the jaws. The application of compressed air to the pneumatic piston thus causes the gripper to open and close. The optional spring enables the gripping force to be maintained proportionally in the event of a drop in compressed air.

**CGS** | COMPATIBLE  
GRIPPER SERIES

- ⊕ Various sizes
- ⊕ Precise and reliable use
- ⊕ Light to heaviest handling weights
- ⊕ Maximum gripping forces

MORE VERSATILE  
GREATER VALUE  
TOUGHER

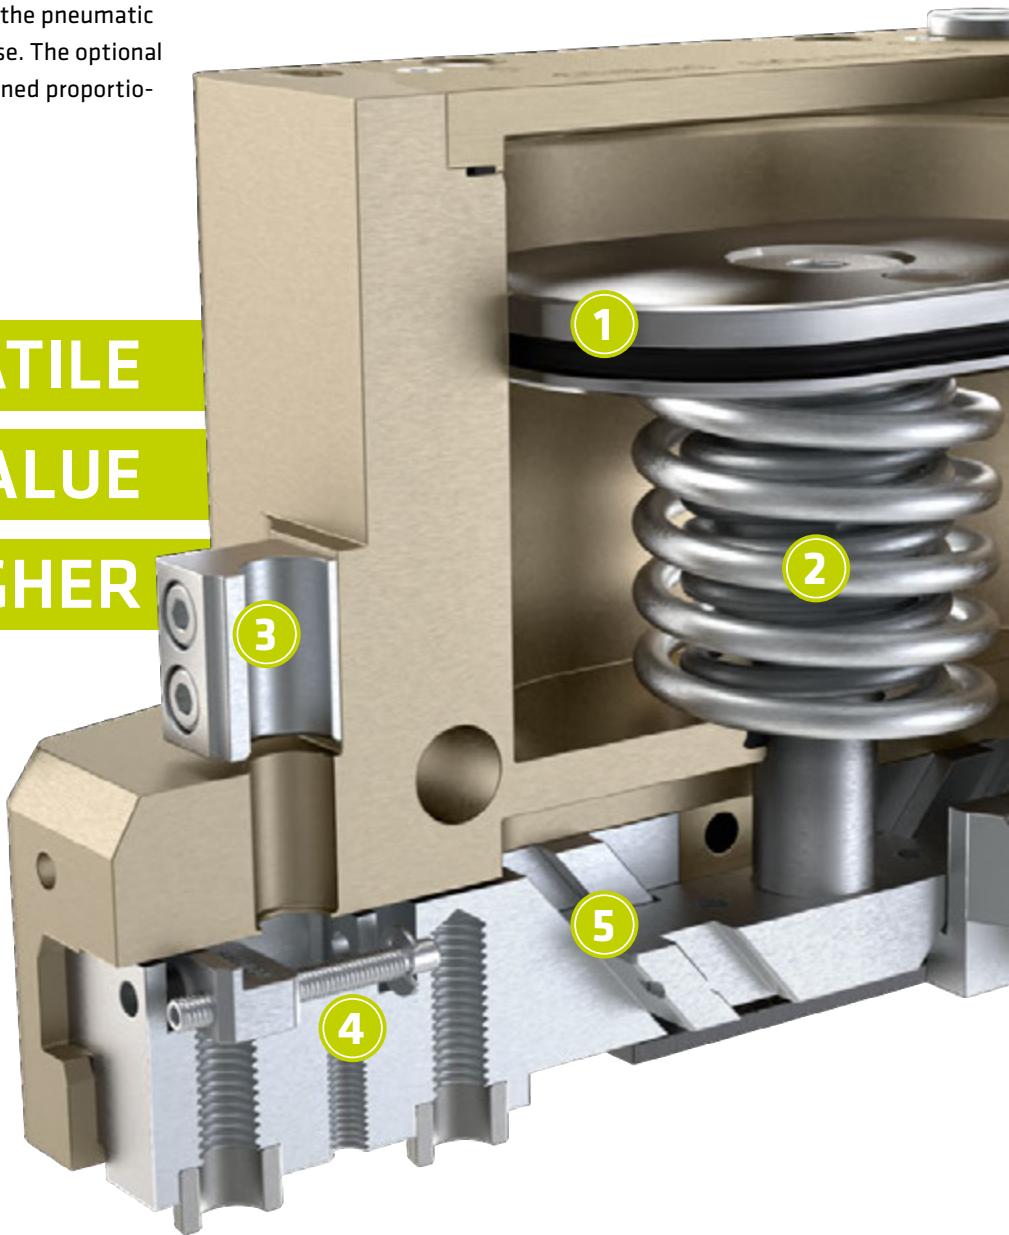

Figure shows CGS2-125-1-FA

## Product advantages & benefits at a glance

- Compatible with standard universal grippers from the competition
- Maximum guide length of the base jaw (suitable for longer gripper fingers)
- Lubricant pockets as grease reservoirs (leads to extended maintenance intervals)
- Up to 15 % lighter than comparable universal grippers due to weight-optimized design
- Optimized position measuring system for safe handling, type recognition and quality control
- Insensitive to crashes, dust and dirt due to the tried and tested T-slot guide
- Oval piston for maximum gripping force (maximum power density, minimum interference contour)
- Customary third-party sensors permissible (standardization of the customers can be matched)

**1**

### Oval piston

The effective area of the piston has been optimized for the geometry of the base body to allow maximum gripping forces.

**2**

### Spring for gripping force retention (depending on version)

Due to a spring installed in the piston chamber, the gripping force can be maintained even in the event of a drop in compressed air pressure.

**3**

### Sensor holder included as standard

Inductive sensors for monitoring the jaw stroke can be mounted in the aluminum blocks below the jaw guides. In addition to that, commercially available magnetic sensors can be inserted in the C-slots in the housing.

**4**

### Cam adjustment made of robust steel

The exact jaw position at which the inductive sensors output a signal for stroke sensing can be defined stepless with standard tools.

**5**

### Backdrop / wedge hook

Thanks to an optimized design of the wedge hook the force of the piston is transmitted to the jaws with low loss and low wear.

**6**

### Lubricant pockets

Pockets in the sides of the jaws allow permanent storage of grease and thus maintenance-free application under normal conditions.

**7**

### Mounting holes for lateral mounting

Different mounting options for fastening of the gripper offer maximum flexibility for any application.

# IRP – The heavy duty gripper

## Key advantages of our IRP series

### Fields of application

The gripper series was developed for use in heavy-duty applications. From clean heavy-duty applications to demanding applications in foundries and forges to dirt-prone applications with high material stress, there is a suitable variant for every task.

### Function description

The vertical stroke movement of the piston is translated via a linkage into a horizontally synchronized movement of the 6 jaws. Compressed air applied to the pneumatic piston causes the gripper to open and close. The optional spring allows the gripping force to be maintained proportionally in the event of a drop in compressed air.

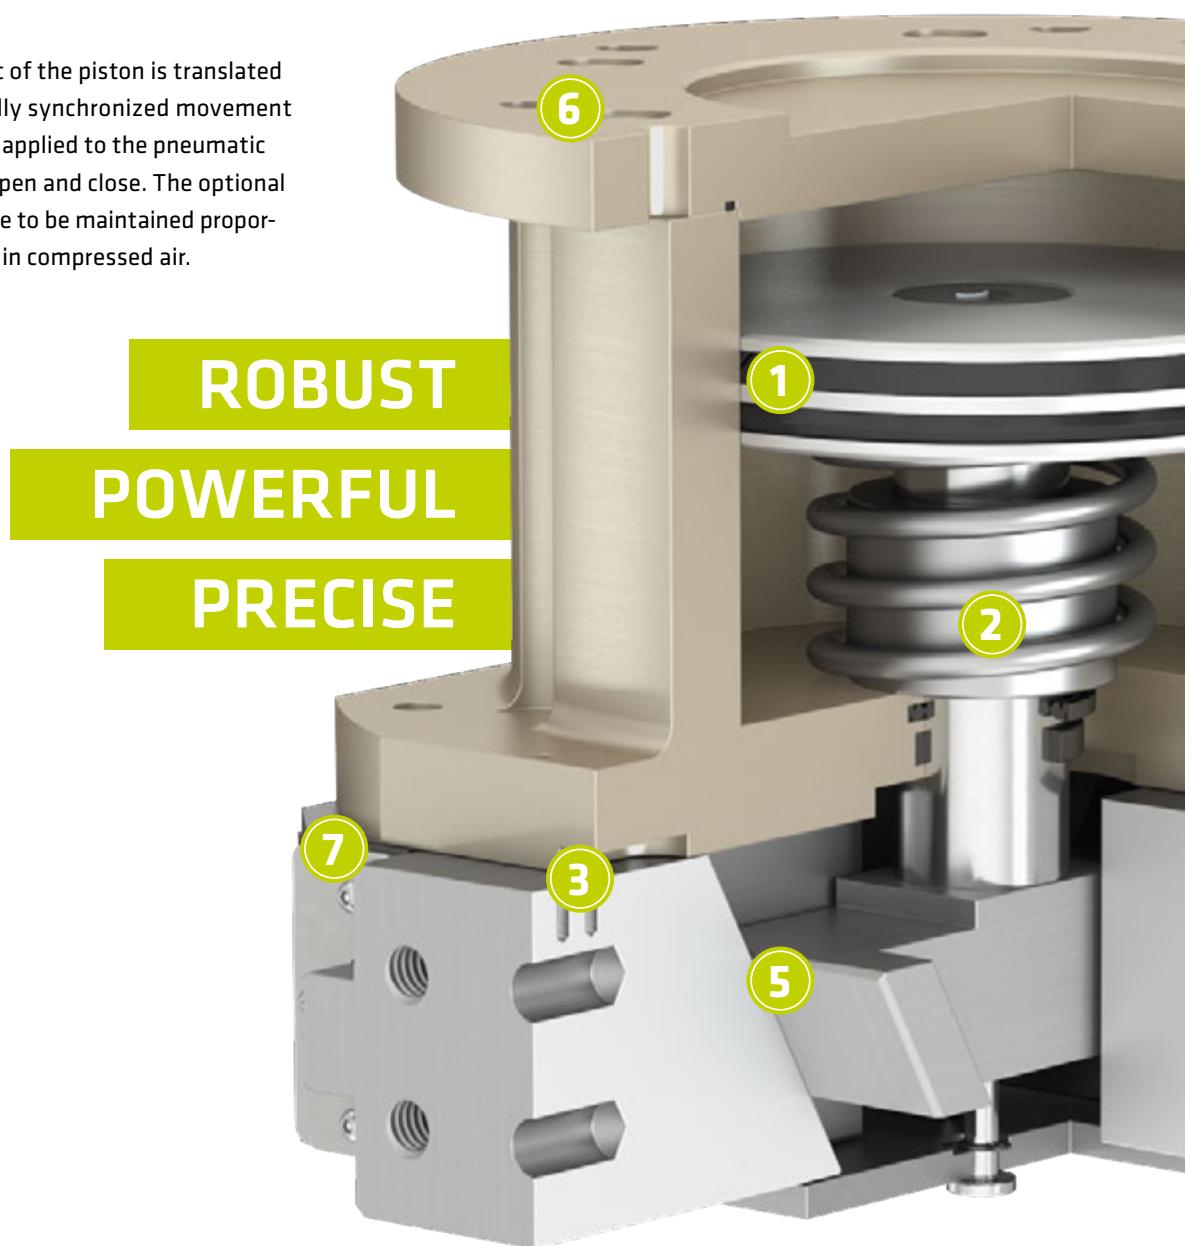

Figure shows IRP-20-ISO-160-FA

## Product advantages & benefits at a glance

- Hardened and ground flat tool steel guides
- Special wipers on the guides of the jaws
- Optimized position measuring system for safe handling, type recognition and quality control
- Optional gripping force retention by spring
- Standardized ISO flange for gripper mounting
- Customary third-party sensors permissible (standardization of the customers can be matched)

**1**

### Pneumatic piston

The effective area of the piston has been optimized for the geometry of the base body to allow maximum gripping forces.

**2**

### Spring for gripping force retention (depending on version)

Due to a spring installed in the piston chamber, the gripping force can be maintained even in the event of a drop in compressed air pressure.

**3**

### Preparation for standard sensors

With the aid of optionally available mounting kits, standard sensors can be mounted directly on the gripper. This enables the jaw stroke to be monitored.

**4**

### Ground gripper jaws in steel guide

Precise steel jaws guided in a steel guide ensure high repeatability and allow large forces to be absorbed.

**5**

### Backdrop / wedge hook

Thanks to an optimized design of the wedge hook the force of the piston is transmitted to the jaws with low loss and low wear and enables synchronized movement.

**6**

### ISO flange for gripper mounting

The integration of a screw-on flange according to ISO 9409-1 makes direct mounting on a robot or tool changer possible without an adapter plate.

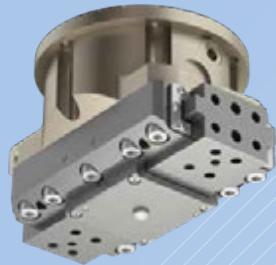

**7**

### Scraper

Special rubber seals on the guides prevent dirt, chips and splash water from entering the guides.

# RP – The sensitive precision gripper

## Key advantages of our RP series

### Fields of application

The gripper series was developed for use with sensitive workpieces. From high-precision assembly applications to the handling of glass and ceramics to the smallest parts in the electronics industry, there is a suitable variant for every task.

### Function description

The vertical stroke movement of the piston is translated into a horizontally synchronized movement of the jaws via a gear rack drive. Pressurizing the pneumatic piston with compressed air causes the gripper to open and close. The jaws are guided by roller bearings in cross roller cages.

**SMOOTH-RUNNING**  
**FLEXIBLE**  
**PRECISE**

Figure shows RP-100-I

## Product advantages & benefits at a glance

- Hardened tool steel guide rails
- Very smooth jaw movement due to roller cages
- Low minimum operating pressure enables handling of delicate workpieces without damage
- Direct power transmission via rack/gear wheel
- Simple sensing of the jaw position via integrated switching flag
- Large opening stroke with small external dimensions

1

### Pneumatic piston

The effective area of the piston has been optimized for the geometry of the base body to allow maximum gripping forces.

2

### Rack and pinion drive

Direct power transmission from the piston to the jaws is ensured by gas-nitrided pinions made of tool steel, which reduces jaw play to a minimum.

3

### Preparation for standard sensors

With the aid of optionally available mounting kits, standard sensors can be mounted directly on the gripper. This enables the jaw stroke to be monitored.

4

### Roller bearings in crossed roller cages

A roller-guided bearing of the jaws eliminates the "stick-slip effect" and enables jerk-free start-up at low operating pressures as well as precise jaw movements without damaging the workpiece.

5

### Guide rails made of hard chromium-plated steel

The high precision and repeatability of the RP grippers is mainly achieved by the know-how of the IPR experts in manufacturing and adjusting the special guide pads.

6

### Various mounting options for gripper fingers

Application-specific fingers can be mounted from above using the threaded holes and pin holes provided.

# MGS – The small parts gripper

## Key advantages of our MGS series

### Fields of application

The gripper series was developed for use in the small parts sector. From interlinked process chains with the shortest throughput times to the handling of electronic components and complex assembly applications, there is a suitable variant for every task.

### Function description

The vertical stroke movement of the piston is translated into a horizontally synchronized movement of the jaws. Compressed air is applied to the pneumatic piston to open and close the gripper. The optionally included spring ensures that the gripping force is maintained in the event of a drop in compressed air.

**ROBUST**  
**PRECISE**  
**COMPACT**

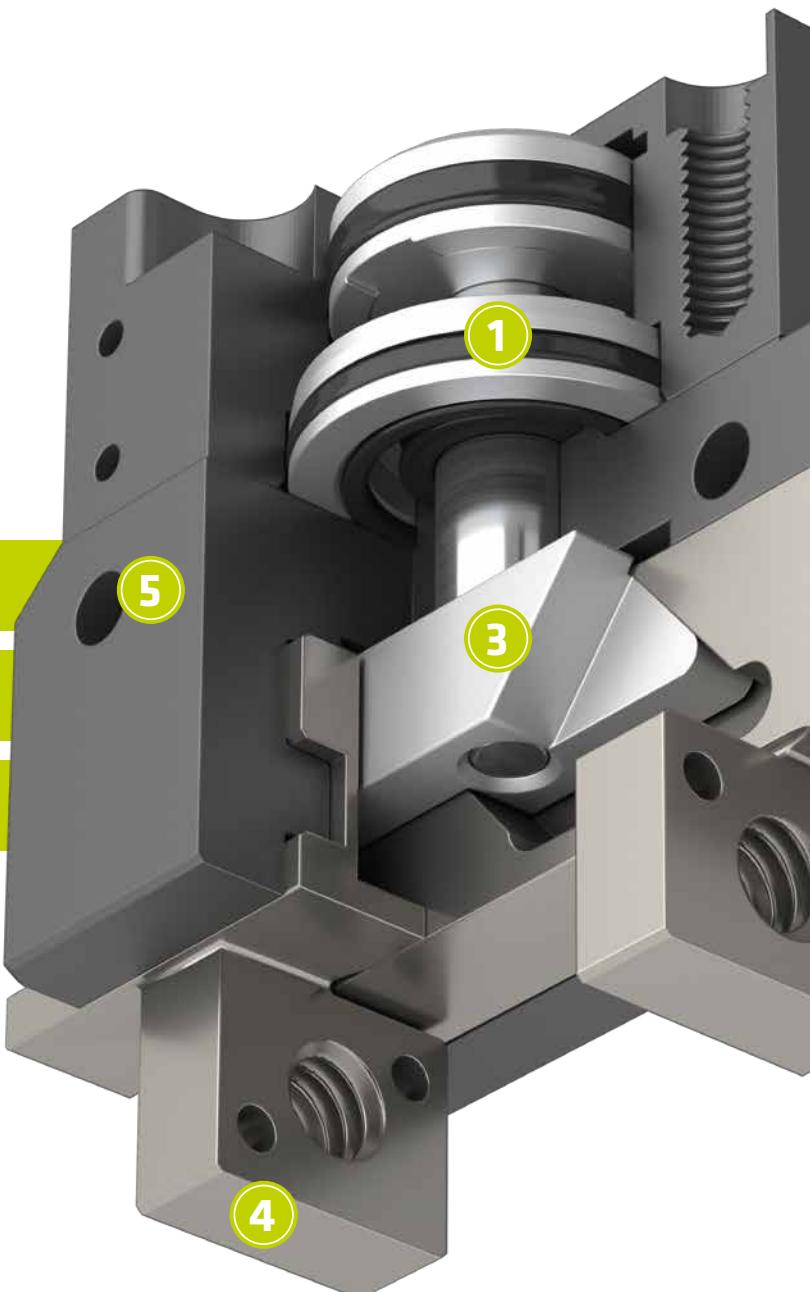

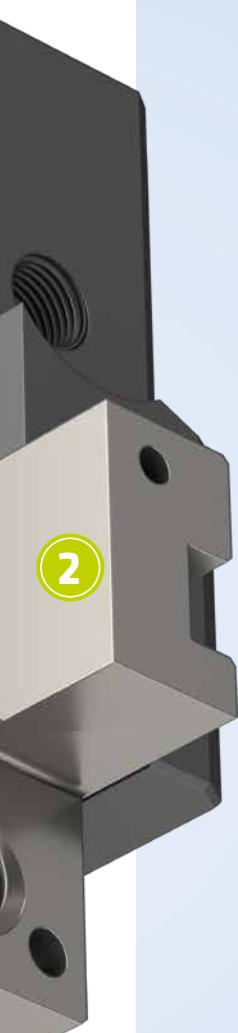

Figure shows MGS-32

## Product advantages & benefits at a glance

- Compatible to commercially available small parts grippers from the competition
- Low weight for maximum dynamics
- Great smoothness enable sensitive gripping
- Shortest motion times allow for high cycle times
- Extremely precise and shock-resistant due to grinded-in sliding guide
- High guide length allows for maximum finger lengths
- Cost-efficient due to maintenance-free operation
- Customary third-party sensors permissible (standardization of the customers can be matched)

**1**

### Pneumatic piston

The effective area of the piston has been optimized for the geometry of the base body to allow maximum gripping forces.

### Spring for gripping force retention (depending on version)

Due to a spring installed in the piston chamber, the gripping force can be maintained even in the event of a drop in compressed air pressure.

### Preparation for standard sensors

Inductive sensors for monitoring the jaw stroke can be mounted in the aluminum blocks below the jaw guides. In addition to that, commercially available magnetic sensors can be inserted in the C-slots in the housing.

**2**

### Geschliffene Greiferbacken

Jaws precisely fitted into the base body ensure high repeat accuracy and enable large forces to be absorbed.

**3**

### Backdrop / wedge hook

Thanks to an optimized design of the wedge hook the force of the piston is transmitted to the jaws with low loss and low wear and enables synchronized movement.

**4**

### Reinforced finger attachment

Typical breaking points on miniature grippers have been reinforced and optimized based on years of experience so that long gripper fingers can be fitted.

**5**

### Mounting holes for lateral mounting

Different mounting options for fastening of the gripper offer maximum flexibility for any application.

# RPW – Large Stroke Gripper

## Key advantages of our RPW series

### Fields of application

The gripper series was developed for universal use. From clean assembly applications to dirt-prone applications in forges and foundries, there is a suitable variant for every task

### Function description

The parallel movement of the jaws is generated by a gear/rack drive using two double-acting pneumatic cylinders. The jaws are guided by toothed racks and guide rods in combination with the slide guided piston rod.

**ROBUST**

**FLEXIBLE**

**SEALED**

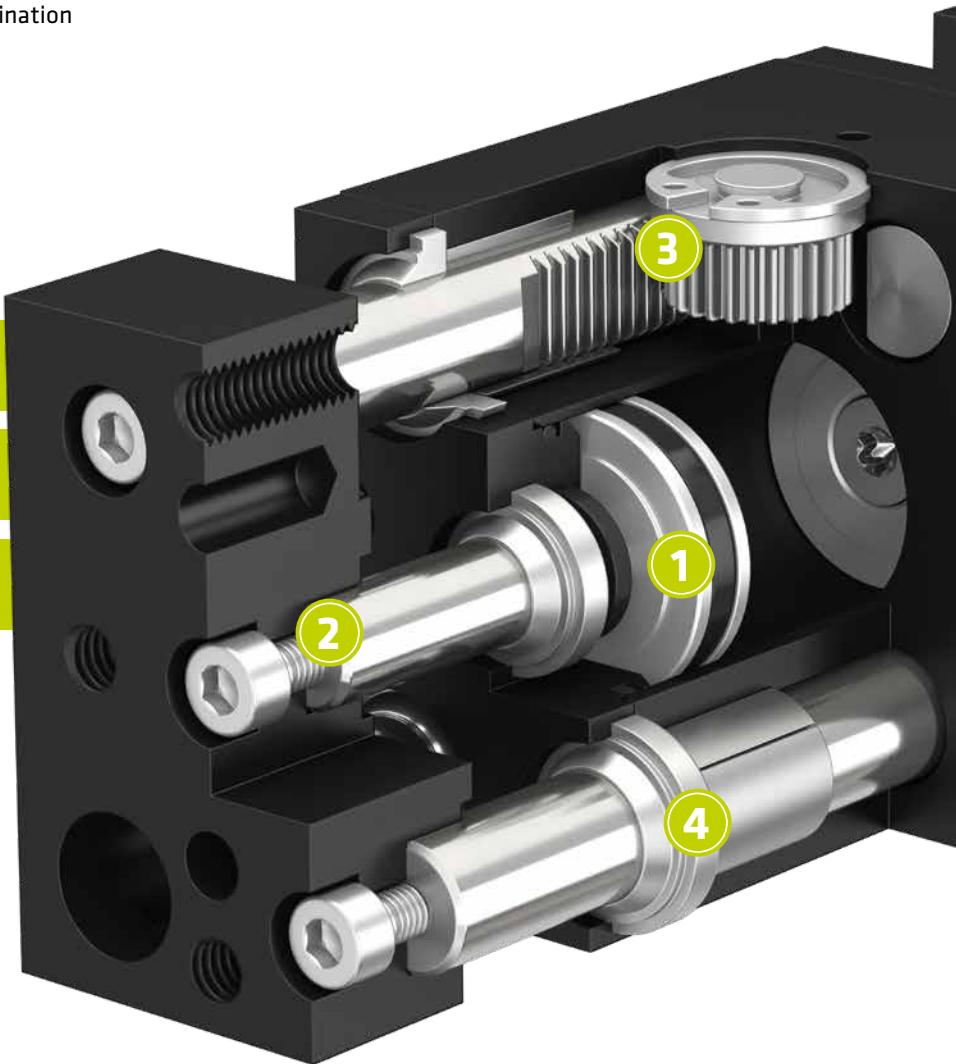

Figure shows RPW-375-1-I

## Product advantages & benefits at a glance

- Sealed round guides with wipers for protection class similar to IP67
- Separate piston for each gripper jaw for direct power transmission
- Gripper attachment possible from two sides
- Different stroke variants in each size for maximum flexibility
- Up to 114 mm total stroke for large workpieces and workpiece variants
- Also available as hybrid variant with electric motor

1

### Two pneumatic pistons

The effective area of the pistons has been optimized for the geometry of the base body to allow maximum gripping forces.

2

### Piston rod bolted to gripper jaw

The use of a separate piston for each gripper jaw means that there is no need to divert the force at all.

3

### Synchronization of the jaws by means of a gear wheel

Uniform jaw movement and force distribution is achieved by means of a toothed rack per jaw in conjunction with a gear wheel.

4

### Scaper

Special wipers on the guide, toothed and piston rods seal the basic body of the gripper and enable a high protection class similar to IP67.

5

### Different stroke variants

Different stroke variants with identical gripping force and different spans are available for each size for maximum flexibility.

6

### Mounting holes for lateral mounting

Different mounting options for fastening of the gripper offer maximum flexibility for any application.

# CGS3 – The centric gripper

## Key advantages of our CGS3 series

### Fields of application

The gripper series was developed for universal use in handling round workpieces. From clean assembly applications to loading and unloading machine tools to dirt-prone applications in forges and foundries, there is a suitable variant for every task.

### Function description

The vertical stroke movement of the piston is translated into a horizontally synchronized movement of the jaws via a link. Compressed air is applied to the pneumatic piston to open and close the gripper. The optional spring enables the gripping force to be maintained proportionally when the compressed air is released.

**PROVEN**  
**PRECISE**  
**DURABLE**

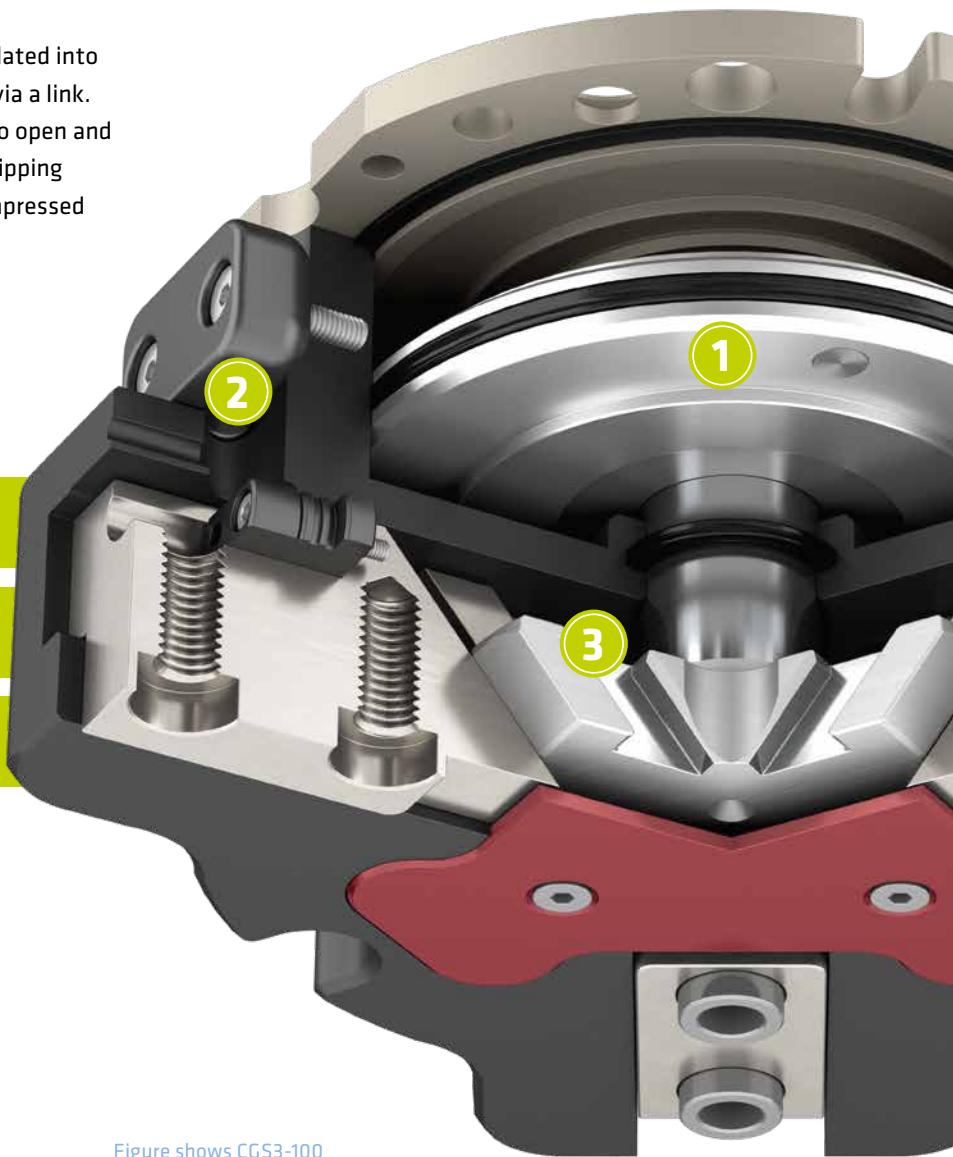

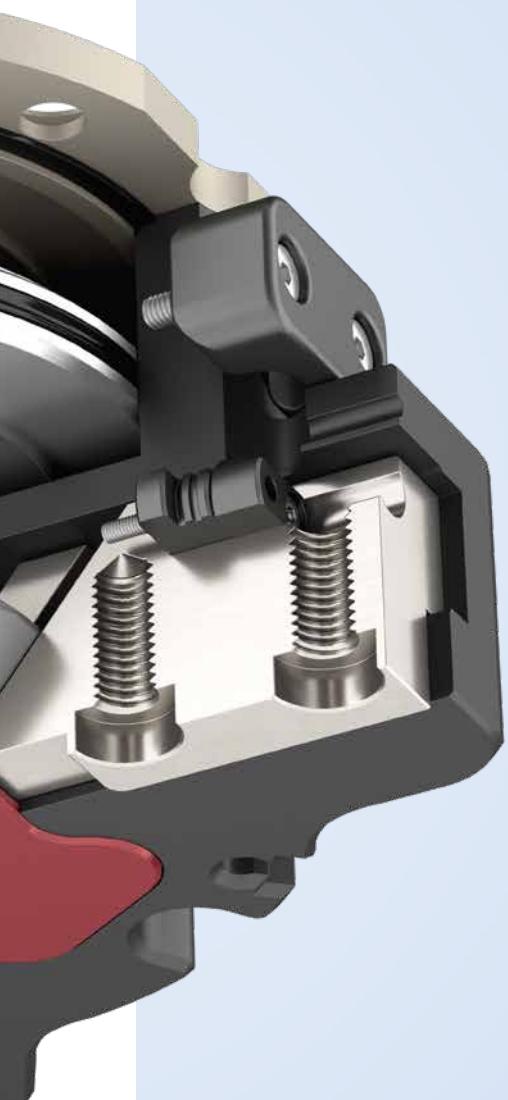

Figure shows CGS3-100

## Product advantages & benefits at a glance

- Compatible with standard universal grippers from the competition
- Maximum guide length of the base jaw (suitable for longer gripper fingers)
- Lubricant pockets as grease reservoirs (leads to extended maintenance intervals)
- Optimized position measuring system for safe handling, type recognition and quality control
- Insensitive to crashes, dust and dirt due to the tried and tested T-slot guide
- Customary third-party sensors permissible (standardization of the customers can be matched)

1

### Pneumatic piston

The effective area of the piston has been optimized for the geometry of the base body to allow maximum gripping forces.

2

### Sensor holder included as standard

Inductive sensors for monitoring the jaw stroke can be mounted in the aluminum blocks below the jaw guides. In addition to that, commercially available magnetic sensors can be inserted in the C-slots in the housing.

3

### Magnetic sensors

The exact jaw position at which the inductive sensors output a signal for stroke sensing can be continuously defined with standard tools.

### Backdrop / wedge hook

Thanks to an optimized design of the wedge hook the force of the piston is transmitted to the jaws with low loss and low wear.

### Lubricant pockets

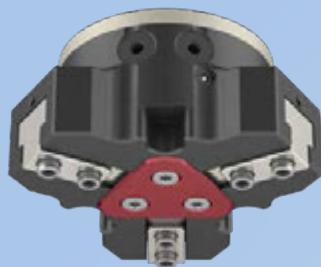

Pockets in the sides of the jaws allow permanent storage of grease and thus maintenance-free application under normal conditions.

### Mounting options for accessories integrated

Application-specific additional components such as pressure stars or supports can be mounted by means of holes under the splitter cover.

# WGS – Angular gripper

## Key advantages of our WGS series

### Fields of application

The gripper series was developed for particularly fast gripping processes and tight installation spaces. Due to the large opening angle of 30°, many different workpieces can be gripped and even confined spaces are no problem for the angular gripper due to the optional stroke limitation.

### Function description

The vertical stroke movement of the oval piston is translated into a synchronized rotary movement of the jaws via lever-bone kinematics. Compressed air is applied to the pneumatic piston to open and close the gripper. The optional spring enables the gripping force to be maintained proportionally when the compressed air is released.

**RESISTANT**

**POWER DENSITY**

**ROBUST**

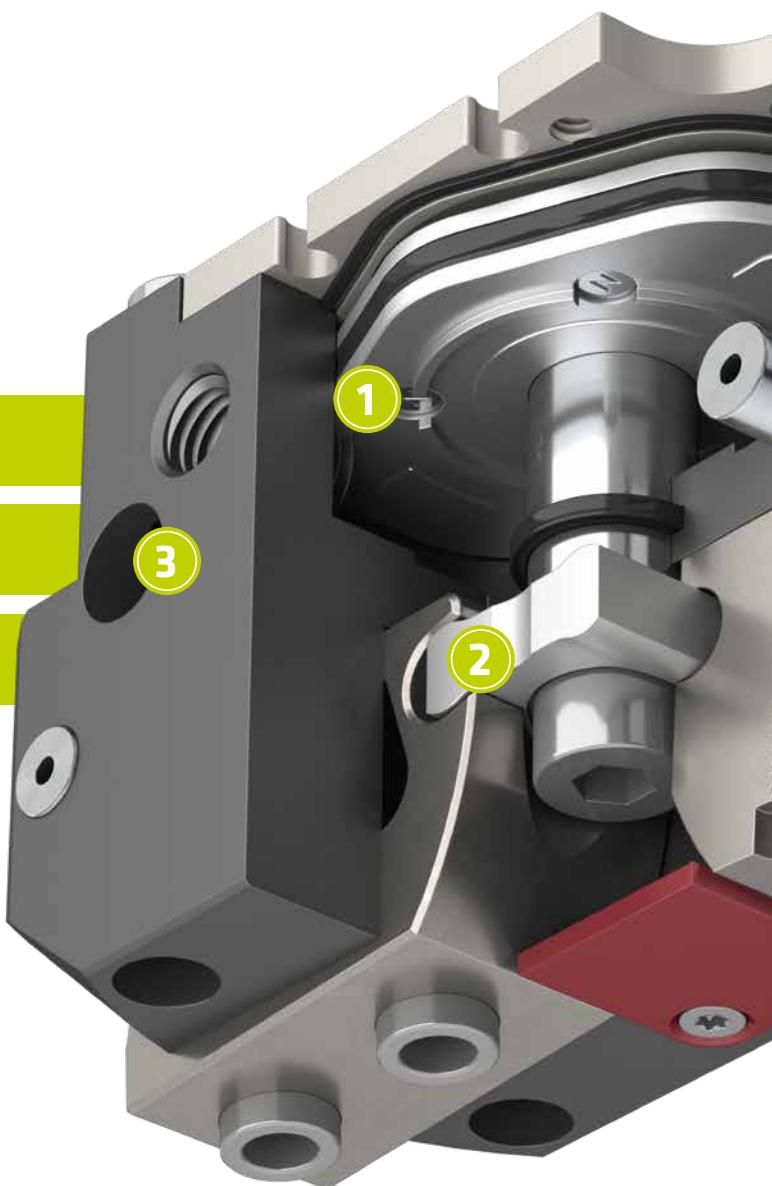

Figure shows WGS-100

## Product advantages & benefits at a glance

- Exchangeable with commercially available angular grippers
- Robust kinematics with lever bones for converting the lifting movement into a rotary movement
- Optional stroke limitation, infinitely variable
- Optimized jaw position sensing for safe handling, type recognition and quality control
- Crash and impact resistant due to proven lever bone kinematics
- Compact dimensions with high performance and reliable functionality
- Oval piston for maximum power density and minimum interference contour
- Customary third-party sensors permissible (standardization of the customers can be matched)

1

### Oval piston

The effective area of the piston has been optimized for the geometry of the base body to allow maximum gripping forces.

### Spring for gripping force retention (depending on version)

Due to a spring installed in the piston chamber, the gripping force can be maintained even in the event of a drop in compressed air pressure.

### Preparation for standard sensors

Standard sensors for sensing the opening angle can be mounted using optionally available mounting kits. In addition to that, commercially available magnetic sensors can be inserted into the C-slots in the housing.

2

### Lever bone kinematics

The robust and reliable power transmission from the piston via the lever bone to the jaws enables precise gripping and high process reliability.

### Mounting option for accessories integrated

Application-specific additional components such as stroke limits or supports can be mounted by means of holes under the kinematic cover.

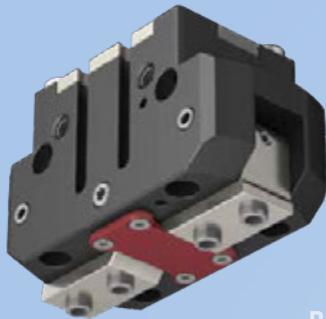

3

### Mounting holes for lateral mounting

Different mounting options for fastening of the gripper offer maximum flexibility for any application.

# Accessories

## The right peripherals for gripping systems from IPR

### All accessories are perfectly coordinated

The grippers from IPR only develop their full potential with the right accessories. Whether it's a simple pick-and-place application, a dirtprone removal operation or a complex assembly process with synchronized grippers – IPR offers the right peripherals for every application.

Sensors in magnetic or inductive design, rubber gripper pads for increased friction on the gripper finger or dust covers for use in particularly demanding environments enable the right configuration to suit your application. We will be happy to support you in your selection!

# Sensors and stroke monitoring

## Reliable query of process parameters directly at the gripper

### Fields of application

You get full process transparency with our sensors. This allows the status of the grippers to be queried and monitored at any time. Depending on the gripper size, sensors are used for the C-slot, in Ø 4 mm or up to M12. Optionally mounted, they can be positioned individually and thus control any states.

### Features

- Standardized sensors for all series
- Including suitable accessories for direct mounting and commissioning
- Variable and universally applicable

# Double check valves

## Reliable protection against loss of parts in the event of an emergency stop or malfunction

### Fields of application

The pressure maintenance valves for short-term and temporary function maintenance of pneumatic products in case of compressed air loss. The currently applied state is frozen and prevents spontaneous workpiece loss or unexpected product movements.

### Description

The double check valve is mounted externally on the gripper modules. Four different sizes are available for selection. The pressure drop is < 0.2 bar at 2 cm<sup>3</sup> test volume and 42 hours test time.

### Features

- Maintaining functionality during compressed air dropouts in pneumatic grippers
- Prevents detachment of gripped workpieces in the event of compressed air failure

# Double check valves

**DSV-1 M5**

**DSV-3 G1/4"**

Operating pressure	0.5 ... 10 bar	0.5 ... 10 bar	0.5 ... 10 bar	2 ... 10 bar

# Gripper Pads

## Improved friction and protection against clamping marks by the gripper finger

### Fields of application

Our sandwich-type gripper pads have an aluminum core that serves to stabilize the shape and facilitate assembly. When shaped, the gripper pads not only increase the coefficient of friction and protect the surface of the workpieces from clamping marks, but can also be used for positive gripping at the same time.

### Description

The gripper pads have a cylindrical dimple contour with a diameter of 2.5 mm. They are suitable for gripping coarse workpieces as well as the finest workpiece contours.

The gripper pads consist of an aluminum/elastomer compound. A choice can be made between an aluminum plate with a thickness of 2 mm and 3 mm, which enables high stability as well as an optimum connection to the gripper fingers.

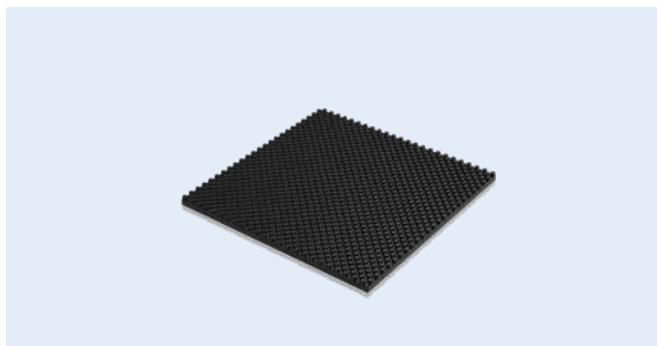

### Features

- Optimum adhesion of workpieces in the gripper jaws
- Safe gripping and transport of workpieces
- Gentle handling of surface-sensitive parts

# Dust Covers for grippers

## Increased tightness similar to IP64 for dirty and dusty environments

### Fields of application

We have used our many years of experience in foundry and forging applications to protect our CGS2 from liquids and dusts with an optional dust cover. This continues to maintain service life even in these adverse environments. Special rubber seals between the moving parts ensure that even fine dusts cannot penetrate.

### Description

The dust cover is made entirely of steel and can be mounted directly on the gripper. Two lateral end blocks, a large cover plate on the guides and two smaller cover plates on the two base jaws, in combination with special seals, increase the gripper's resistance to external influences.

### Features

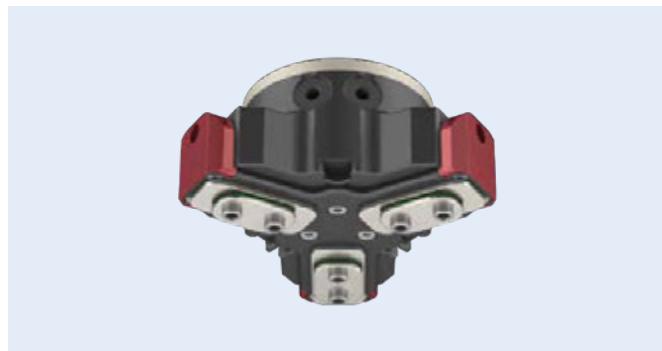

- Increases the gripper's resistance to external influences such as cooling lubricant, chips, oils, etc.
- Sealing similar to protection class IP64
- Can be retrofitted for all sizes of the CGS2 series

# Pressure stars for robot grippers

## Integrated spring element for joining without overloading the robot

### Fields of application

A workpiece must be placed in the correct position and must not slip after the gripper is released? Our optionally available pressure star can help you here.

After opening the gripper and when the robot moves away, it presses the workpiece onto the workpiece carrier by means of an integrated spring.

### Features

- Ideal for loading machine tools
- Retroactively mountable
- Minimizes wear and overload of the robot

### Description

The pressure star for the CGS3 series integrates a spring-loaded element for pressing the workpiece directly into the centric gripper. The pressure star is mounted in the center between the three jaws of the gripper. When the workpiece is picked up, the springs are being compressed and held in this position. As soon as the gripper sets the workpiece down again and the jaws open, the pressure star is being pushed out by the springs and presses the workpiece against the stop of the fixture. This ensures that small shape and position tolerances have no influence on the defined deposit position of the workpiece. Additionally the robot does not have to apply increased pressure forces that could lead to excessive wear or malfunctions. The pressure star can be retrofitted to the CGS3 gripper.

# Stroke limitations for robot grippers

## Limited opening angle to avoid collisions with angular grippers

### Fields of application

You achieve the correct stroke with the WGS when using the stroke limiter (optionally available). The attachment kit enables stepless adjustment of the desired stroke.

### Features

- Maximum opening angle stepless selectable
- Retroactively mountable
- Easily adjustable

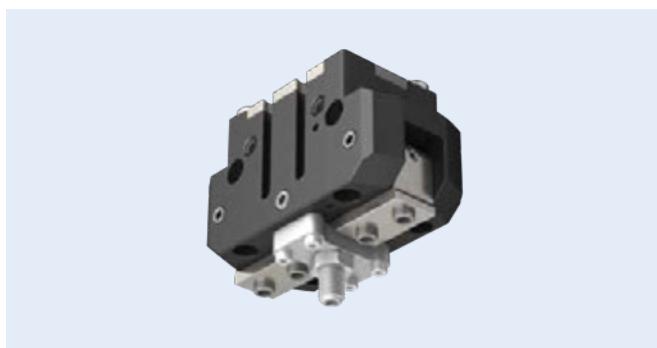

### Description

The stroke limitation for the WGS series limits the opening angle of the gripper to a freely selectable and infinitely adjustable degree. This allows the angular gripper to be used even if there is little space around the workpiece in the application and a full opening angle of 30° (total) would lead to collisions.

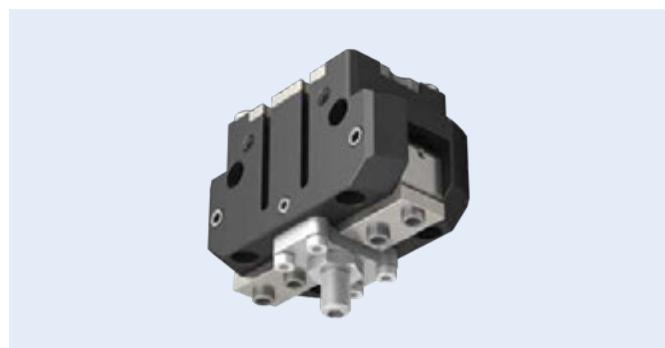

The stroke limitation can also be retrofitted to the WGS gripper and is quick and easy to adjust using an Allen key.

# Standard is not enough for us

## Solution competence made to measure

Our standard components can easily be adapted to customer-specific requirements. Various attachments and accessories are available for this purpose.

For more complex applications, where the modification of standard components no longer offers a sensible solution, we design special components that are precisely tailored to your applications. Many years of experience help us to find a technically and economically fit solution for you – quickly and effectively.

**Special nozzle  
changer for seam  
sealing applications**

### Personal consulting

We are happy to provide advice on our components and technologies. Benefit from the long standing experience of the IPR advisors.

01

### CONSULTING

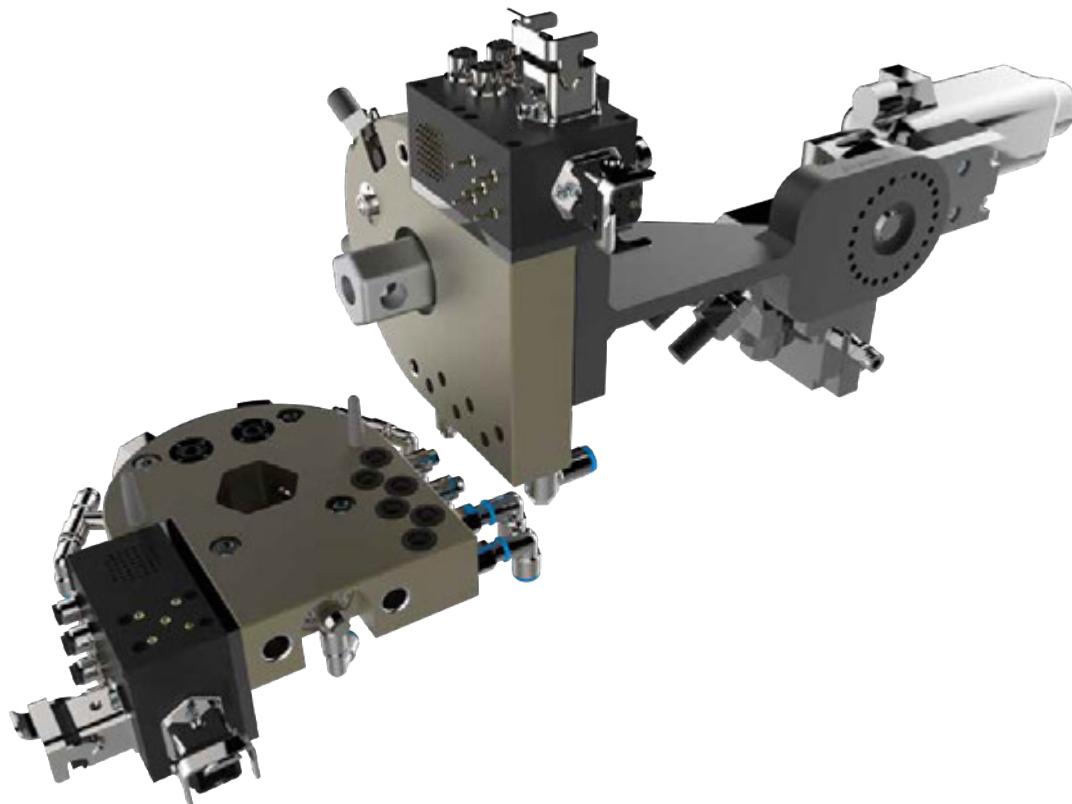

Our expert employees specifically address your wishes and requirements and offer you competent advice on your application. With over 30 years of experience in the production of high-quality components and systems, IPR supports and supplies its customers worldwide, thereby creating valuable customer proximity.

02

### QUOTING & PROJECT PLANNING

In the next step, we develop a solution proposal for you and create a project plan in this context. This is followed by a cost-benefit optimization and a feasibility analysis. These include the technical designs as well as constructive tests by our engineering team.

**Complex  
tool changer for  
PVC applications****03****ENGINEERING  
AND DESIGN**

Our engineers and designers are professionals in their field and have in-depth knowledge of all industries and processes. Our specialists implement individual projects professionally and on schedule. Look forward to first-class conception and implementation.

**04****MANUFACTURING**

A machine park equipped with the latest technologies and processes, great know-how in manufacturing as well as highly trained employees ensure that every single product is manufactured with the highest precision, quality and passion to your satisfaction.

**05****ON SITE SERVICE**

We offer you a unique support in every phase – even after commissioning: from maintenance and repair service to spare parts service and customer training on site or at IPR. Our professional services show that customer proximity is very important to us.
